

IndusShield

Your bank already knows what you're not protected against.

A mobile-first protection platform that turns bank signals into insurance action.

You meet your insurer twice: when they want money, and when you want money.

DISCOVER — *confusing*

Jargon-first products, agent-led selling.

1.0%

Non-life penetration, % of GDP — flat (IRDAI FY25)

Insurance is bought when sold, not when needed.

OWN — *forgotten*

No engagement between purchase and renewal.

>50%

of vehicles on Indian roads are uninsured (MoS Finance, Parliament)

Even a legally mandatory product lapses at scale.

CLAIM — *feared*

Documentation-heavy, opaque, slow.

69%

of all general-insurance complaints are about claims (IRDAI FY25)

~8% of health claims are repudiated (IRDAI FY25)

The result: a product everyone needs, structured as a transaction nobody wants a relationship with.

A ₹3 lakh crore market. And 42 million customers already inside the building.

THE MARKET

₹3.07 lakh cr

India non-life gross premium, FY25 (+6% YoY)

41%

health's share — now the largest line, overtaking motor

1.0%

penetration as % of GDP. The headroom is the market.

THE INDUSSHIELD FUNNEL (serviceable path, 3-yr view)

42,00,000

IndusInd customers (actual, Dec 2025)

~18,00,000

digitally active retail adults, insurable (assumption ~43%)

12,00,000

protected customers by Year 3 (assumption ~6.5% attach)

₹1,140 cr

gross written premium (assumption ₹9,500 blended annual)

Everyone starts when the customer searches. Nobody starts when the signal appears.

Rohan is not uninsured. He's unprotected — and he doesn't know it.

ROHAN MEHTA

32 • Mumbai

- › IndusInd salary a/c since 2019
- › Relationship value ₹8.4L / yr
- › Married • one child (4)
- › Maruti Baleno • IndusInd auto loan
- › 3 policies across 2 insurers
- › Opens zero insurance apps

HIS BANK STATEMENT ALREADY KNOWS

02 JUL • ICICI LOMBARD ₹8,420

→ motor cover with a competitor — expires in 11 days

18 JAN • LILAVATI HOSPITAL ₹18,600

→ paid out of pocket; ₹5L corporate cover capped at ₹5,000/day room

14 JUL • MAKEMYTRIP ₹42,800

→ Dubai trip in 13 days — zero travel cover

05 JUL • RENT ₹45,000

→ ₹45k/month flat — no contents cover

JOB TO BE DONE “When my life changes, I want my protection to catch up automatically — so my family is never exposed by my forgetfulness.”

FUNCTIONAL one place, no jargon, fast claims

EMOTIONAL confidence he's not under-covered

SOCIAL the one who has it handled

Vision: protection the bank does for you — not a product you remember to buy.

THREE THINGS ONLY THE BANK HAS

1 IDENTITY

Full KYC, income, family, address. Buying cover = confirming, not typing. A 40-second purchase flow.

2 SIGNALS

Transactions reveal life events and competitor premiums. The moment of need is detected, not guessed. Every rupee of the ₹3.07L cr market flows through some bank's rails.

3 TRUST + MONEY MOVEMENT

Premiums debit from — and claims settle into — the same account. The claim isn't a cheque; it's a credit entry you watch arrive.

FOR ROHAN

- ✓ One vault, every insurer
- ✓ Gaps found before crisis
- ✓ Claims in minutes, in-app
- ✓ Plain language, always

FOR INDUSIND

- ✓ Attach rate on 42M existing customers
- ✓ Near-zero CAC vs. digital insurers
- ✓ Renewal float + retention + cross-sell
- ✓ The reason to open the bank app weekly

Depth in two categories beats a shallow super-app.

THE WEDGE – MOTOR + HEALTH

scope, justified

MOTOR

Mandatory by law, yet >50% of vehicles lapse. Annual renewal = a guaranteed re-engagement moment. IndusInd runs a major vehicle-finance book — every auto loan is a motor customer we already underwrite.

HEALTH

41% of the market and the highest emotional stakes. The gap isn't ownership, it's adequacy: corporate covers with room-rent caps that fail exactly when used. Top-ups are the easiest honest cross-sell in insurance.

THREE PILLARS

- 1

DISCOVER

Surface the gap before the customer feels it.
- 2

MANAGE

One vault for every policy — including other insurers'.
- 3

RESOLVE

Turn the worst moment into the best one.

EXPANSION SEQUENCE

SEQUENCE: Core (Motor+Health) → Ring 2 (Travel + Home – signal-triggered, low premium, habit-forming) → Ring 3 (Cyber + family) → Platform (import any insurer via Account Aggregator)

One score, eleven screens, three jobs.

THE SPINE — PROTECTION SCORE

ROHAN 62 / 100

Six categories, one number. Coverage adequacy weighed against income, dependants and city cost of care — not just “do you own a policy.” Gaps are drawn as visible dashed absence.

1 DISCOVER

- **Signal cards** — recommendations anchored to a real transaction, shown as a ledger row
- **Compare** — honest tables (we lose a row on purpose) + tap-any-jargon decoder
- **40-second buy** — KYC pre-filled, nothing retyped

2 MANAGE

- **Vault** — every policy, ours and detected
- **One-tap import** — competitor policies pulled from statement data
- **Renewal timeline** — across all insurers, one view

3 RESOLVE

- **Photo claim** — AI estimate in ~2 minutes
- **Live claim timeline** — with garage + surveyor status
- **Assist** — answers grounded in your policies, not generic FAQs

The AI isn't a chatbot bolted on. It's the reason each pillar works.

SIGNAL ENGINEPERSONALIZATION

Consent-based classification → gap detection. Every recommendation carries its evidence — the ledger row is the explanation.

CLAIMS AIAUTOMATION + FRAUD

4 photos → ₹18,400 estimate → cashless in ~2 min. The same vision layer flags fraud as a by-product.

ASSISTGROUNDED SUPPORT

Answers from Rohan's real policies — not generic FAQs, and in plain English.

ECOSYSTEMRETENTION MECHANIC

Free telemedicine, roadside, health checks. Wellness points cut renewal price — the reason to open the app.

Same customer. Same policy. The difference is who noticed first.

TODAY - Rohan's motor renewal

FORGOTTEN | UNCERTAIN

WITH INDUSSHIELD

90 seconds | Rs 530 saved | NCB preserved | nothing retyped

COMPARE PLANS

every term tappable

Not mockups. Deployed.

<https://indus-shield-product-matters-6-0-capstone-prototype-hrwe3ce9v.vercel.app/>

CLAIMS AI

Photo → ₹18,400 estimate → cashless approval in 2 minutes.

VAULT IMPORT

A competitor's policy, pulled from a statement line into the vault. The thesis, animated.

ASSIST

The monsoon-flood answer, grounded in his actual Baleno policy.

MoSCoW: the MVP is the thesis, nothing else.

MUST (MVP)	SHOULD (v1.1)	COULD (v2)	WON'T – for now
Protection Score + gap reasons	Health top-up flow	Wellness rewards engine	Life / pet / rental lines
Policy vault + statement import	Renewal timeline	Family accounts	Real-time fraud scoring
Signal cards (consented)	Ecosystem bookings	Cyber cover	Agent / RM console
40-sec buy — motor renewal first	Assist v2 (multi-turn)	Voice claims intake	Open marketplace
Claim file + track (motor)	Document downloads	Statement-wide auto-import	International cover
Assist (scripted core Qs)			

MVP test: one session must let a customer feel the whole thesis — see a gap → import a competitor policy → fix it in 40 seconds → trust the claim path. Each Must maps to a pillar.

Won't ≠ never — Won't = not until the North Star says the core loop holds.

North Star: Monthly Active Protected Customers.

MAPC = ≥1 active policy via IndusShield AND ≥1 meaningful action / 30 days
(renewal • claim step • import • score check • service booking)

TARGET
1.2M by Year 3

Why: you can't grow by selling policies people forget — it forces adoption, engagement and retention at once.

COUNTER-METRICS – what we refuse to break

Notification opt-out < 5% • Mis-sell complaints ≈ 0 • Repudiation < industry 8% • Signal false-positive < 10%

Distribution is already built. GTM is sequencing, not spending.

WAVE 1 · MONTHS 0-3

The auto-loan book

Every active vehicle loan requires motor cover. Renewal-timed in-app nudges + statement inserts. Highest intent, cleanest data rights, measurable from week one.

→ Beachhead, not billboard.

WAVE 2 · MONTHS 3-6

Salary accounts with signals

Consent prompt in the bank app: "We noticed 3 things in your account that affect your protection — want to see them?" Curiosity converts where cold pitches don't. RM-assisted for affluent tiers.

→ Curiosity, not cold pitch.

WAVE 3 · MONTHS 6-12

The corporate adequacy play

Salary-account employers → group-cover gap analysis → individual top-ups. B2B2C, where the Lilavati story is every employee's story.

→ One story, every employee.

12-MONTH ROADMAP · IN PILLAR COLOURS

0-3 · LAUNCH

Motor + Health MVP · Protection Score · statement import · motor claims. (the Must column)

3-6 · DEEPEN

Travel + home signals · wellness rewards · Assist v2 (multi-turn).

6-12 · WIDEN

Cyber · family accounts · Account-Aggregator import of any insurer's policy → the vault becomes the industry's front door.

How it makes money, what we're assuming, what could break — and the honest answer to each.

MONETIZATION

- 1 Distribution + underwriting on every vault policy — near-zero marginal CAC (vs. digital insurers' >100% combined ratios).
- 2 Retention: renewals + float + cross-sell (target 1.8 policies / customer).
- 3 Ecosystem take-rate — and the quiet one: insurance becomes the reason the bank app opens weekly.

ASSUMPTIONS • stated, not hidden

- Consent when value is shown transparently — DPDP-compliant, explicit opt-in; the ledger row IS the consent story.
- Signal precision $\geq 90\%$ before anything surfaces.
- Bancassurance / IRDAI norms permit this integration depth.
- Claims AI holds accuracy on top damage classes at launch.

RISKS → MITIGATIONS

- Privacy backlash** → opt-in only; every card shows its source txn; one-tap pause-all.
- Notification fatigue** → precision gate + hard cap ≤ 2 / month.
- Adverse selection** → score-informed underwriting; top-ups medically underwritten.
- Regulatory shift** → corporate-agency structure day one; mfr. licence only at scale.

**Your bank already knows what you're not protected against.
Now it acts on it.**
